The health care provider is responsible for determining nutritional requirements and monitoring patient tolerance to feedings. Higher calorie formula concentrations should be used only under the direction of a medical professional. Water volumes are exact, while final volume of prepared formula may vary slightly. Scoop from the container should be level and unpacked. Weighing powder using a gram scale provides greatest accuracy. Nutritional values are approximate, based on calculated results.

As with any powdered infant formula product, use with immune compromised infants is not recommended.

When such use is necessary, we recommend following the Academy of Nutrition and Dietetics guidelines for safe preparation, storage, and administration.
